

The Slant RollRacks

Information & Specifications

(model SLRR24-II shown)

The HSA Slant RollRacks give you a convenient way to house and protect a wide variety of 19" rack mount and non-rack-mount electronic equipment. Very suitable for boardroom, Houses of Worship, educational, corporate, recording and other professional environments, the HSA Slant RollRacks are an elegant and easy way to aesthetically blend audio, video and many other electronic systems into their surroundings.

Materials & Assembly: Slant RollRacks are handcrafted from a selection of engineered core and multi-core panels with premium Red Oak faces for high dimensional integrity, consistency and strength. Extra thick contour edging is used to match the oak or other optional/custom wood species or high pressure laminates.

Slant Angled Front: The angled front of the Slant RollRacks provide exceptional equipment access and visual monitoring with a sleek, aesthetically pleasing appearance.

Rack: These 16 and 24 space racks are fitted with heavy-duty steel rails with extra half-rack tapped screw holes to allow for a wide variety of equipment spacing. A full 2.00 inch clearance is given between the rack rail face and the backside of the closed rolltop tambour door. The rack rear is a completely finished, 3/4" thick, tab-locked and machine screw secured, removable door panel for easy access, great appearance and maximum security. The panel features a bottom cable cutout for wire routing and is easily optioned for fan mounting, ventilation, connector panels, etc. The rack floor comes standard with ventilation slotting and a large cable/wiring floor pass through. Other custom modifications and variations are available.

Tambours: We hand build our own tambour doors to assure quality and extra strength. The 1.5" by 1/2" thick tambours are

- ▶ The most beautiful & functional solution for housing electronic systems
- ▶ 16 and 24 rack space versions
- ▶ Beautiful & practical locking rolltop door - it's the "Roll" in RollRack!
- ▶ Up-angled slant design for better visual monitoring of equipment
- ▶ "2 screws" easy access removable rear door with lower cable exit
- ▶ Well-ventilated floor with large, easy wiring entrance/exit
- ▶ Solidly & carefully crafted
- ▶ With a variety of finishes

lead by a 2" wide by 3/4" thick lead tambour for extra strength at the lock and polished brass handle. The thicker profile results in a very smooth operation that can be maintained with an occasional application of ordinary wax. A flush mounted cabinet lock on the lead tambour engages on the rack's lower inside, securing the rollfront tambour door without getting in the way.

Finish: A variety of stain colors are available with our popular and environmentally friendly waterborne finishing system. These advanced waterborne stains, sealers and finish coats produce a beautiful grain pattern and depth of color. They maintain the natural feel of the wood yet offer some of the best protection from abrasion and spills and keep looking great with minimal upkeep. Actual color samples are available to help you make your selection.

Other Slant RollRacks Benefits: The Slant RollRacks offer additional safety and security by organizing equipment and wiring which, in modern open installations, could be a source of many problems. Being able to "lock-down" the system prevents unauthorized tampering with equipment and wiring between uses. Furthermore, the HSA Slant RollRacks (and our other fine wood furnishings) convey an image of professionalism and quality, presenting your audio, video, lighting or any electronic system in the very best way and as a matching, integral part of its environment.
